

Cobblestone Pub Management Portal

Operations Training Manual

All sections in one document.

For the latest version, see the docs/ folder of the repo.

Cobblestone Pub App — Standard Operating Procedure

This document is the master operating procedure for the Cobblestone Pub management app. It ties together the per-section briefs (in this same folder) into daily / weekly / monthly checklists.

For the deeper "what does X do and how do I use it" detail on any section, open its brief. They're numbered:

1. Dashboard
 2. Payroll — Weekly
 3. Payroll — Accountant Files
 4. PTO Tracker
 5. Bookkeeping & Invoices
 6. Backroom Bookings
 7. Settings
 8. New Manager Onboarding
 9. Year-End Checklist
-

Daily routine

Morning (10 min)

1. **Open the Dashboard.** Scan yesterday's net sales vs the same day in
2. Anything off by more than 20% — investigate.
3. **Open Bookings.** Anything happening today? Door staff arrangements confirmed? Door fee paid?
4. **Open Bookkeeping.** Drive watcher panel — any pending invoices in the root folder? Any errors flagged on the most recent scan? Click Scan Drive Now if anything looks unprocessed.

Throughout the day

- Suppliers email invoices to `invoice@cobblestonepub.ie` — the system imports them automatically. You don't need to do anything until the weekly review.
 - Staff request leave → log it on `/pto` so the Payroll page picks it up automatically next week.
 - New booking enquiries arrive → review on `/bookings` and either Confirm, set Tentative, or Reject.
-

Weekly routine

Sunday night / Monday morning (after the work week ends)

1. **PTO auto-recalc** runs at 23:00 Sunday (Dublin) automatically. Check `/pto` Monday morning — every active employee should have an accrual row for the week that just ended. If anyone shows 0 accrued for a week they worked, see the PTO troubleshooting section.

Monday — Tuesday: prepare payroll

1. `/payroll` for last week.
2. Enter tips, cleaning, bonus per employee. **Save**.
3. Verify Holiday Pay column matches what's logged on `/pto`.
4. Click **Peter Excel** → download → email to Peter (the accountant).
5. Click **Finalize Week**. This locks tips/cleaning/bonus.

Wednesday — Thursday: process Peter's reply

When Peter sends back the gross-to-net summary + combined payslips:

1. `/payroll/accountant` for that week.
2. **Upload** both PDFs.
3. **Confirm Mappings** — first time: pick the right Cobblestone employee for any unmapped row, save. Subsequent weeks: auto-mapped.
4. **Test Gmail Connection** — quick check that drafts will work.
5. **Generate Drafts**.
6. **Open Gmail Drafts** in `info@cobblestonepub.ie` → review each → Send. Should take ~5 minutes for the whole team.

Friday: bookkeeping review

1. `/bookkeeping` → filter Status = Pending.
2. For each: click in, verify supplier / amounts / VAT / category, approve. Reject duplicates and junk.
3. Clear the queue before close of business.

Sunday: this week's bookings prep

1. `/bookings` → filter to this coming week.
 2. For each show: door arrangements set? Door staff assigned?
 3. Reach out manually if any band hasn't replied to the reminder emails.
-

Monthly routine

First few days of the new month

1. **Dashboard** — verify the previous month's totals look reasonable. Scroll to the VAT periods section.
 2. **Bookkeeping** — confirm every invoice for the previous month is Approved, not Pending. The VAT period totals depend on it.
 3. If a VAT period has just closed (15th of every other month): - Verify the period status moved from "Pending" to "Due" on the Dashboard. - Cross-check the net VAT due against your accountant's number. - If they differ by more than rounding, drill into the monthly breakdown on Bookkeeping to find the difference.
-

Quarterly / occasional tasks

When a new employee joins

1. Square first: add them as a Team Member with pay type, rate, email.
2. `/settings` → **Sync from Square** → they appear as Staff.
3. Set Category if they're Management or Upper Management.
4. Set Cleaning (€/wk) if applicable. Save.
5. (PTO will start accruing automatically from their first timecards.)

When someone leaves

1. Square first: set their Team Member status to Inactive.
2. `/settings` → tick **Former?** for that employee → Save.
3. Their data stays in history; they're sorted to the bottom of PTO and excluded from active payroll calculations.

When a supplier starts emailing the wrong address

If a new supplier emails `info@` instead of `invoice@`:

1. Gmail (`info@cobblestonepub.ie`) → Settings → Filters and Blocked Addresses → Create new filter.
 2. From: `accounts@thatsupplier.com` .
 3. Forward to: `invoice@cobblestonepub.ie` .
 4. (Optional: also Skip the Inbox / Archive on `info@` to keep that inbox clean.)
-

Troubleshooting cheat sheet

Symptom	Where to look
Dashboard says "Loading..." for ages	First-load — wait 2-3 min
Numbers on Dashboard look stale	Click refresh button (top right of dashboard)
Employee not on Payroll page	<code>/settings</code> → Sync from Square
Hours = 0 on Payroll for someone who worked	Square doesn't have their timecards
Holiday Pay missing on Payroll	Log it on <code>/pto</code> first; auto-syncs
Payroll Test Gmail fails: <code>unauthorized_client</code>	Workspace delegation propagation, wait 2 min
Drive watcher panel shows red "API not used"	Enable Drive API in Google Cloud project
Drive watcher shows 403	Share folder with <code>info@</code> as Editor
<code>GOOGLE_DRIVE_INVOICES_FOLDER_ID</code> not set	Set env var on Render → cobblestone-pub
Invoice arrived but shows "Unknown" supplier	Open it, edit, save. Claude was unsure.
PTO accrual = 0 for a week someone worked	Check Payroll for that week; recalc PTO
Booking confirmation email didn't arrive	Check Render logs for the booking

What runs automatically (background jobs)

Job	Cadence	What it does
Dashboard cache warmup	At app boot	Pre-fetches each week's Square data
Gmail invoice poller	Every 30 min	Pulls PDFs from <code>invoice@</code> , extracts, saves
Drive folder watcher	Every 30 min	Imports human-uploaded PDFs from the invoices folder
PTO weekly auto-recalc	Sundays 23:00 Dublin	Recalculates 4 weeks of accruals + 13-week avg shifts
Booking reminders (cron)	Daily	Sends pre-show reminders
Booking auto-complete	Daily	Marks past bookings Completed

All of these are **idempotent** — safe to run multiple times, won't double-process anything.

To check any of these is running, look at the cobblestone-pub service logs on Render and grep for the prefix: - [gmail] — invoice email poller - [drive] — Drive folder watcher - [pto-weekly] — PTO auto-recalc - [warmup] — Dashboard cache priming

Credentials and where they live

The app needs three credential sets, all stored as env vars on the **cobblestone-pub** Render service:

1. **SQUARE_ACCESS_TOKEN** — Square API access for sales, timecards, team members.
2. **GOOGLE_SERVICE_ACCOUNT_JSON** — Full JSON of the Google service account (from the GCP project `cobblestone-pub-app`). Used for: - Gmail invoice polling on `invoice@cobblestonepub.ie` - Gmail draft creation on `info@cobblestonepub.ie` - Drive folder access (read + write + move)
3. **ANTHROPIC_API_KEY** — Claude API for invoice extraction.
4. **GOOGLE_DRIVE_INVOICES_FOLDER_ID** — Drive folder where supplier invoices land (and the watcher scans).
5. **GOOGLE_DRIVE_STATEMENTS_FOLDER_ID** — Drive folder where supplier statements (rolled-up account summaries) land.

The service account in (2) needs **domain-wide delegation** authorised in Google Workspace Admin for these scopes: - `https://www.googleapis.com/auth/gmail.modify` - `https://www.googleapis.com/auth/drive`

Plus **Google Cloud APIs** enabled in the same project: - Gmail API - Google Drive API

Plus the **Drive invoices folder** must be shared with both: - `info@cobblestonepub.ie` (for the Drive watcher) - `invoice@cobblestonepub.ie` (for the email poller's uploads)

If you ever need to rotate the service account key, generate a new JSON in GCP, paste it into Render's `GOOGLE_SERVICE_ACCOUNT_JSON`, save. Render auto-redeploys; everything resumes.

When in doubt

If something breaks and the troubleshooting table doesn't help:

1. **Check Render logs** for the cobblestone-pub service — most issues surface there with a clear error message.
2. **Check the relevant section's brief** in this folder.

-
-
3. **The flash messages on each page** usually say exactly what's wrong when they're red.

Dashboard

URL: /dashboard

What it does

The Dashboard is the weekly performance view: net sales, payroll spend, labour percentage, daily breakdown, t-shirt merch, and Irish VAT period totals — all pulled live from Square.

Data is cached in SQLite so the page loads in under a second after the first hit each morning. Cache is auto-refreshed in the background; you don't need to do anything to keep it current.

Key sections

1. **KPI strip** — net sales for the most recent completed week, year-on-year uplift vs 2025, payroll % of net sales, t-shirt unit/revenue totals.
2. **Daily sales vs 2025 same week** — per-day bars comparing the selected week to the same week last year. % delta is shown above each bar (green if up, red if down). Click any week button (W02, W03, ...) to switch.
3. **Net sales by week** — full-year overview with 2025 vs 2026 stacked.
4. **Year-on-year % change** — line chart of week-over-week YoY change.
5. **Payroll by week** — total payroll plus the Upper Management vs Management+Staff split per week.
6. **Hours by day (current week)** — staff hours mapped against daily sales.
7. **VAT periods** — the two upcoming Irish VAT bi-monthly periods with output VAT computed from sales and input VAT pulled from the bookkeeping module (or fallback hard-coded values for months without invoices yet).

How to use it

- **Daily check:** open the page each morning. The most recent completed week is what to focus on. The current (in-progress) week is shown but is partial — don't compare it directly to a full week.
- **Compare a specific week:** click the week button (W02, W03, ...) under the Daily sales chart to switch focus.
- **Force a refresh:** if numbers look stale, click the refresh icon in the top right. This clears the current week's cache and re-pulls from Square. Completed weeks are cached forever (they don't change), so the refresh only re-fetches the current and last few weeks.

Common questions

- **Why is this week's number lower than last week's?** The current week is partial — it includes whatever days have happened so far. Don't compare partial-to-full.
- **Why doesn't the YoY KPI include this week?** It excludes the current partial week so you're always comparing completed weeks to completed weeks.
- **The dashboard says "Loading..." for ages.** First-time data load from Square takes 2-3 minutes. The page auto-refreshes every 15 seconds. You only see this on a fresh deploy.

When something looks wrong

- **A week shows €0 sales:** Square API didn't return data for that week. Click refresh, or check Square is reachable. If it persists, look at Render's logs for [gmail] or Square errors.
- **VAT period shows "pending":** the input VAT for one of the months in the period hasn't been confirmed yet. Either wait for invoices to flow in (and be approved on the bookkeeping page) or hard-code the value if you have the accountant's number from elsewhere.
- **YoY uplift looks wrong:** the comparison is by ISO week number, so weeks shift by a day across years. This is the correct comparison for weekly hospitality businesses.

Payroll — Weekly Process

URL: `/payroll`

What it does

The Payroll page assembles each employee's hours, gross pay, tips, cleaning allowance, and total labour cost for one week. Hours come from Square timecards; tips, cleaning, and bonuses are entered manually because they're managed separately from Square. The page is the launchpad for sending payroll to the accountant.

Once a week is "finalized," tips/cleaning/bonus values are locked. They can be unlocked with the admin password if a correction is needed.

How to use it (weekly cadence)

1. **Open `/payroll`** — defaults to the current week. Use the week selector at the top to navigate.
2. **Enter tips, cleaning, bonus** for each employee. Use the Tab key to move across. Click **Save Tips, Cleaning & Bonus** at the bottom.
3. Verify the **Holiday Pay (h)** column matches what you've already logged on the PTO page. If anyone is missing leave that should be there, log it on the PTO page first — it auto-syncs back here.
4. Click **Peter Excel** to download the formatted file the accountant expects. Email it to Peter.
5. Click **Finalize Week** when you're confident nothing else will change. Locks tips/cleaning/bonus until unlocked.
6. When Peter sends back the gross-to-net summary + payslips, see the **Accountant Files** brief.

Columns explained

Column	Source / Notes
First / Last	From Square (synced via Settings)
Rate	Hourly rate from Square
Hours	Sum of regular + overtime + double-time from timecards
Gross	Hours × rate, OR fixed weekly salary if salaried
Tips	Manually entered. NEVER pulled from Square's tip fields
Cleaning	Manually entered. Default per-employee in Settings
Bonus	Manually entered (rare; for one-off bonuses)
Holiday Pay (h)	Auto-synced from /pto based on logged leave
Total	Gross + Tips + Cleaning + Bonus
Category	UM / M / S badge — set in Settings
Labor Cost	Gross + Cleaning + Bonus (excludes tips for labour %)
Net (accountant)	After Peter's PDF is uploaded — read-only

Other actions on this page

- **Raw Timecards** download — exports a per-shift CSV-style breakdown for audit purposes.
- **Import Tips** — one-time historical import from the Tips Sheet 2026 spreadsheet. Don't run this casually.
- **Accountant Files** — opens the upload + draft generation flow.

Common questions

- **An employee worked but doesn't appear** — they may not be in `employee_categories`. Go to Settings → Sync from Square to pull them in.
- **Total looks wrong** — check Tips/Cleaning/Bonus aren't being double-counted (e.g. someone paid for cleaning but it's also in Bonus).
- **Holiday hours didn't sync** — log the leave on the PTO page (not here). The Payroll page is read-only for holiday hours.

When something looks wrong

- **"Save Tips, Cleaning & Bonus" doesn't seem to save:** the week may be finalized. Look for the yellow "This week is finalized" banner. Click Unlock, enter admin password, then save.
- **Hours = 0 for someone who worked:** Square doesn't have their timecard. Either they didn't clock in, or there's a Square sync issue. Check Square Dashboard directly to confirm.
- **Wage rate = €0:** Square Team Member doesn't have a rate set. Update in Square; Settings → Sync from Square will pick it up.

Payroll — Accountant Files

URL: `/payroll/accountant`

What it does

After the weekly Peter Excel is sent and Peter returns the **gross-to-net summary** plus the **combined payslips** (one PDF page per employee), this page handles everything that follows:

- Parses the gross-to-net summary and saves each employee's net pay.
- Splits the combined payslips PDF into one PDF per employee.
- Creates a Gmail draft per employee in `info@cobblestonepub.ie` with their payslip attached and a personalised body that includes their PTO summary for the week (staff and management; upper management gets the same email minus the leave block).

You review the drafts in Gmail and click Send when happy.

How to use it

First time only — one-time setup

- Make sure each employee has an email on file. The fastest way is on Settings → click **Sync from Square** — pulls in any emails set on the Square team profile. Anyone missing an email will be skipped during draft generation.

Every week, after Peter replies

1. **Open** `/payroll/accountant` for the current week (or click the **Accountant Files** button on the Payroll page).
2. **Section 1 — Upload Peter's PDFs** - Gross-to-Net (Short) PDF - Combined Payslips PDF (one page per employee) - Click **Upload & Parse**.
3. **Section 2 — Confirm Employee Mappings** - The system matches each row to a Cobblestone employee using the reference number Peter assigns (1, 12, 18, ...). After the first successful run, the mapping is remembered, so future weeks auto-match without you doing anything. - First-time runs will have ~5 unmapped rows because of name spelling differences (e.g. PDF says "MacInnes" with lowercase L; database has "MacInnes" with capital I). Pick the right person from the dropdown for each yellow row, then click **Save Mappings**. - The "View" link on each row opens that person's split payslip PDF in a new tab — useful for double-checking before Generate Drafts.

4. **Section 3 — Generate Email Drafts** - Disabled until every row is mapped. - First click **Test Gmail Connection** (just creates a self-addressed test draft to verify auth — delete it from Gmail Drafts after). - Then click **Generate Drafts**. One Gmail draft is created per employee in `info@cobblestonepub.ie` with:
- Subject: Cobblestone Pub – Payslip Week N, period ending DD/MM/YYYY
 - Body filled in with their PTO accrual + balance for staff/management
 - Their split payslip PDF attached
5. **Review and send in Gmail** - Open Gmail at `info@cobblestonepub.ie` → Drafts. - Walk through each draft, confirm the recipient and attachment look right, click Send. - If anything's wrong, edit in Gmail before sending.

Columns on the Mappings table

Column	What it shows
Ref	Peter's payroll reference number (the match key)
Name on Payslip	Exact text from Peter's PDF (Mr/Ms titles included)
Cobblestone Employee	Dropdown — pick the matching person from your DB
Gross / Net	Read from the gross-to-net PDF
Payslip	View link → opens that person's one-page PDF

Behind the scenes

- Net Pay shows up as a read-only column on the regular Payroll page once you've uploaded for that week.
- Per-employee payslip PDFs are stored as BLOBs in SQLite, keyed by pay period and employee. They survive deploys.
- Drafts use the Gmail API via the same service account already authorised for the invoice tracker. Only `info@` is impersonated for drafts.

Common questions

- **Why drafts and not direct send?** Deliberate. Lets you eyeball each email before it goes out. Once you trust the workflow, sending all 13 drafts takes about 90 seconds.
- **Can I re-upload after generating drafts?** Yes — re-uploading replaces the parsed data for that week. You'll need to re-generate drafts if the net amounts changed. Existing drafts in Gmail are not auto-deleted; clean them up manually.

- **Upper management see the leave block?** No. Categorisation happens automatically based on the Settings page Category column.

When something looks wrong

- **"Test Gmail Connection" fails with `unauthorized_client`:** domain-wide delegation hasn't propagated. Wait 2-5 min and retry. If persistent, check Workspace Admin → Domain Wide Delegation has the `gmail.modify` scope authorised.
- **Mappings show "unmapped" yellow even after saving:** the employee probably has a different `team_member_id` than the saved mapping (e.g. recreated in Square). Pick from the dropdown again and re-save.
- **A draft is missing:** the employee has no email on Settings (skipped), or there's no payslip PDF for that ref (the combined PDF was incomplete). Check the results panel for the specific reason.

PTO Tracker

URL: `/pto`

What it does

Tracks annual leave accrual and usage for every employee. Numbers come from the Irish standard accrual rules baked into the engine:

- **Hourly staff:** 8.08% of hours worked, converted to days using the rolling 13-week average shift length.
- **Salaried staff:** 0.4 days per week worked.
- **Maximum balance:** 21 days. Anything earned beyond this is preserved as "over cap" — when leave is taken, the cap is replenished from the surplus before the visible balance drops.

Accruals automatically recalculate every Sunday 23:00 Dublin time (background job on Render). You can also trigger a manual recalc any time.

Page sections

1. **Summary table** — every employee with: total accrued, total taken, adjustments, current balance, accrual type (Hourly / Salaried), and 13-week average shift length. Anyone over the 21-day cap shows `+N.NN over cap` under their balance.
2. **Log Leave Taken** — quick form to record a day of leave for any active employee.
3. **Manual Adjustment** — for one-off corrections (starting balance, admin grant, etc.). Requires a reason.
4. **Recent Leave Taken** — log of the last 20 leave records, with employee names (not codes) and reasons.
5. **Recalculate PTO** — admin tool to re-run accrual calculation for a date range. Used after backdated Square timecard edits or when fixing data issues.

How to use it

Recording leave when an employee takes a day off

1. Open `/pto`.
2. In **Log Leave Taken**, pick the employee, set the date, set days (1.0 for a full day, 0.5 for half).
3. Add a reason if useful (e.g. "Annual leave", "Sick").

4. Save. The leave shows up in the Recent Leave Taken table and feeds automatically into the Payroll page's Holiday Pay column.

Granting a starting balance to a new hire

1. **Manual Adjustment** form.
2. Pick the employee, enter a positive number of days, set effective date, write the reason (e.g. "Starting balance per offer letter").
3. Save.

Fixing an accrual that didn't compute

1. **Recalculate PTO** modal at the bottom of the page.
2. Set From and To dates covering the affected period (e.g. 4 weeks back to today).
3. Run. The engine re-runs accrual week-by-week for every employee. Any "Protected" weeks (imported from the V4 spreadsheet) are skipped and reported in the success message.

Column glossary

Column	Meaning
Type	Hourly or Salaried (drives the accrual formula)
Avg Shift	13-week rolling average shift hours (hourly only)
Total Accrued	Lifetime accrual, uncapped
Adjustments	Sum of manual adjustments (positive or negative)
Total Taken	Sum of logged leave days
Balance	$\min(\text{Accrued} + \text{Adjustments} - \text{Taken}, 21)$

Common questions

- **Why is my balance 21 even though Total Accrued is higher?** That's the cap. The surplus is preserved — when leave is taken, the visible balance stays at 21 until the buffer is gone.
- **Why didn't an employee accrue last week?** Square may not have their timecards. Check `/payroll` for that week — does it show their hours? If no, the timecards aren't there. If yes, click Recalculate PTO with the right date range.
- **What's "13-week avg shift"?** For hourly staff, leave is accrued in hours then converted to days. We need to know "what's a typical day for you" — that's the

avg shift. Computed from the last 13 weeks of shifts; falls back to 8.0 if fewer than 5 shifts.

- **Why is my Type "Hourly" but I'm a salaried manager?** Type is read from Square's Team Member `pay_type`. If wrong, fix it in Square.

When something looks wrong

- **An employee shows 0 accrued for a week they worked:** click Recalculate PTO with that date range. If still 0, the timecards aren't in Square — check the Payroll page for that week.
- **Balance dropped to 0:** likely an adjustment with a large negative number. Look in the Adjustments history (admin only).
- **Recalculate fails:** error message will name the problem. Often it's a Square API rate-limit; wait a minute and retry.

Auto-recalc job

A background thread on Render fires every Sunday at 23:00 Dublin time and recalculates the past 4 ISO weeks for every employee. This catches:

- Backdated Square timecard edits
- New employees added during the week
- The 13-week avg shift changes as old weeks roll off

Look for `[pto-weekly]` lines in Render's cobblestone-pub logs to confirm it's running.

Bookkeeping & Invoices

URL: /bookkeeping

What it does

Captures every supplier invoice and turns it into a structured record (supplier, date, net, VAT, total, category) that feeds VAT period totals on the Dashboard.

There are **three intake paths** that all converge on the same place:

1. **Email at `invoice@cobblestonepub.ie`** — a background poller checks the inbox every 30 minutes, pulls PDF attachments out, runs them through Claude AI to extract structured fields, and saves them.
2. **Drive folder uploads** — drop any PDF directly into the configured Google Drive invoices folder. A background watcher imports it within 30 minutes.
3. **Manual upload via the page** — the **Upload PDFs (AI)** button on the Bookkeeping page accepts up to 20 PDFs at a time.

Invoices vs statements

Each PDF coming in is **classified** before processing:

- **Invoice** — a bill for a single transaction, with line items, VAT, invoice number, and total. Goes through the AI extractor and into the bookkeeping invoice list. Contributes to VAT period totals.
- **Statement** — a roll-up of multiple invoices ("here's everything we billed you this month + your outstanding balance"). Goes into the separate Statements module, accessible via the **Statements** button at the top of the Bookkeeping page. Statements do **not** feed VAT period totals — they're a record-keeping and reconciliation tool.

The classifier uses filename, email subject, and PDF text content. It's **conservative** — when in doubt, treats the PDF as an invoice. If something gets misclassified either way, you can fix it with one click:

- On an invoice: open it → **Actually a Statement** button
- On a statement: open it → **Actually an Invoice** button

Statements arrive at `invoice@` get filed in the **statements Drive folder** (set via `GOOGLE_DRIVE_STATEMENTS_FOLDER_ID`). Invoices go to the **invoices Drive folder**. Both have their own `Processed/` subfolder where files end up after import.

Whichever path an invoice takes, it ends up: - As a record in the bookkeeping list (status: Pending Review) - As a stored PDF on disk + in the Drive invoices folder - Renamed to [imported-YYYY-MM-DD] {original}.pdf and moved to the Processed/ subfolder in Drive (Drive watcher path; the email poller uploads with the original name and the watcher tidies it up next pass)

How to use it (daily / weekly)

When invoices arrive

You don't need to do anything proactive. Suppliers email `invoice@cobblestonepub.ie` (or you forward from `info@`); the system pulls them in. You'll see them appear on the Bookkeeping page.

Reviewing pending invoices

1. Open `/bookkeeping`.
2. Filter by **Status = Pending** if the list is large.
3. For each row: - Click the supplier name → opens the invoice form with extracted fields pre-filled. - Verify supplier, date, net/VAT/total amounts, and category. - Adjust anything wrong (Claude is good but not infallible). - Change status to **Approved**. Save.

When suppliers email the wrong address

If a supplier emails `info@cobblestonepub.ie` instead of `invoice@`, set up a one-time **Gmail filter** on `info@`:

1. Gmail → Settings → Filters and Blocked Addresses → Create new filter.
2. From: `accounts@thatsupplier.com` (or whatever).
3. Has attachment, filename contains `pdf` (optional, narrows further).
4. Forward to: `invoice@cobblestonepub.ie`.

Now their invoices auto-route to the right inbox.

When someone hands you a paper invoice

1. Scan to PDF.
2. Either: - Drop the PDF directly into the Drive invoices folder, or - Click **Upload PDFs (AI)** on the Bookkeeping page and select it.

Either way, it's imported automatically.

Page sections

1. **Drive watcher status panel** — at the top, shows the count of PDFs pending in the root of the invoices folder, links to the folder and the Processed subfolder, and the last scan time + result. **Scan Drive Now** triggers an immediate scan.
2. **Monthly Input VAT** — current-year monthly totals, used by the Dashboard's VAT period KPI.
3. **Filters** — date range, supplier, category, status.
4. **Invoices table** — all matching invoices, totals at the bottom.

Status values

- **Pending Review** — newly imported, hasn't been verified by a human
- **Approved** — confirmed correct, counts toward VAT period totals
- **Rejected** — duplicates, errors, junk PDFs

Common questions

- **An invoice shows "Unknown" supplier:** Claude couldn't identify the supplier from the PDF. Open the invoice, type the right name, save.
- **AI confidence is "low":** the extraction wasn't certain. Always human-review low-confidence invoices before approving.
- **Why are some PDFs in the folder still in root?** The watcher only runs every 30 minutes. Click **Scan Drive Now** to trigger immediately.
- **A duplicate appeared:** dedup is by file hash. If a supplier sent the same PDF twice (e.g. once to `info@`, once forwarded to `invoice@`), it's deduped automatically. If two slightly different PDFs of the same invoice both got imported, mark one as Rejected.

When something looks wrong

- **Drive watcher panel shows red error:**
 - "GOOGLE_DRIVE_INVOICES_FOLDER_ID not set" → set the env var on Render.
 - "Drive API has not been used in project ..." → enable the Drive API in Google Cloud Console for that project.
 - "insufficient authentication scopes" → add `drive` scope to the domain-wide delegation in Workspace Admin.
- **Email poller not picking up new invoices:**
 - Check Render's cobblestone-pub logs for `[gmail]` lines.
 - Verify `GOOGLE_SERVICE_ACCOUNT_JSON` is set and valid.

- Verify the service account is authorised for `gmail.modify` scope in Workspace Admin.
- **Drive uploads failing with 403:** verify `info@cobblestonepub.ie` has Editor access on the invoices folder. Right-click the folder in Drive → Share → confirm.

Backroom Bookings

For day-to-day workflow, see the dedicated docs: - 10 — Go-Live Runbook (May 2026)
- 11 — Manager SOP - 12 — Shane's Quick Reference

This file is the high-level system overview.

URLs: - Public gig form: `/book` - Public other-events form: `/book/other` (filming, rehearsal, private) - Admin tracker: `/bookings` - Per-booking detail: `/bookings/<id>` - Per-booking band portal: `/book/<token>` (one per booking) - Multi-gig contact portal: `/portal/<token>` (one per email) - Sound engineer view: `/sound` (Shane's login)

What it does

End-to-end management for The Backroom (and Upstairs) gigs:

- Bands submit a booking request via the public form.
- Management reviews and confirms (or marks tentative / rejects).
- A confirmation email goes out with a unique band-facing portal link.
- The portal lets bands re-confirm, read the info sheet, see door arrangements, and pay venue/door fees via Square Payment Links.
- A separate cron job sends pre-show reminders and door-confirmation nudges.
- The admin tracker shows everything past, present, and future, with filters and venue / status badges.

There's a separate, more detailed SOP for this module (the `Cobblestone_Bookings_SOP` PDF in the project root). This brief is the high-level overview.

Day-to-day flow

When a band submits a request

1. New booking lands at `/bookings` with status **Inquiry**.
2. Open it. Review the act, date, attendance estimate, ticketing.
3. Decide: - **Confirm** → triggers a confirmation email with a portal link. - **Tentative** → soft-hold; can move to Confirmed later. - **Reject** → polite decline email.
4. If confirming, double-check the door arrangements and ticketing fields are populated before sending.

Pre-show

- The reminder cron runs once a day. Bookings within ~7 days get a "ready to play?" email; bookings within ~2 days get a door-arrangement reminder.
- If a band hasn't confirmed door arrangements close to the date, you can reach out manually via their email or phone (both shown on the booking detail page).

Day of show

- Door staff look up the act on `/bookings` (filter to today).
- Door fees, if applicable, can be marked paid in the booking detail.
- The Toyota-style Kanban inventory module isn't part of bookings — see `/admin` for that.

After the show

- Auto-complete: a daily cron marks past bookings as **Completed** automatically.
- You can still edit or add notes after that for record-keeping.

Key admin pages

- `/bookings` — main list. Filters by venue, status, date range, search by act name.
- `/bookings/blackouts` — dates the venue is unavailable (private events, maintenance). Shows on the public form.
- `/bookings/series` — recurring bookings (e.g. weekly residencies).
- `/bookings/contacts` — saved band contacts so repeat acts auto-fill on the public form.

Public + portal pages

- `/book` — public booking form. Anyone can submit.
- `/book/<token>` — band's private portal. Token is unique per booking; never expose publicly.
- The portal has tabs for Info Sheet, Tech Spec, Door Arrangements, Payments. Each acknowledged action is logged in the booking audit.

Common questions

- **A band says they didn't get the email:** check Render logs for the send timestamp. If it sent, ask them to check spam (the portal link often gets flagged on first send). You can re-trigger the confirmation email from the booking detail.

- **The public form rejects a date:** that date is on the blackout calendar. Either change the blackout or pick a different date.
- **A series booking didn't auto-create:** series generation runs daily. If urgent, manually trigger from `/bookings/series`.

When something looks wrong

- **Portal link is dead:** the token may have been regenerated. Check the booking detail page for the current `public_token` and re-send.
- **Reminder cron not running:** check the `cobblestone-daily-reminders` Render service logs. It pings `/admin/run-reminders` once a day.
- **Squarespace payment didn't sync:** verify the Square webhook is configured to hit `/admin/square-webhook` on the cobblestone-pub service.

For deeper detail on bookings, refer to: - 11 — [Manager SOP](#) — primary day-to-day reference - 10 — [Go-Live Runbook](#) — pre-launch + cutover - 12 — [Shane's Quick Reference](#) — engineer view

Settings

URL: `/settings`

What it does

The Settings page is the master employee directory. Every other module (Payroll, PTO, Accountant Files, Email Drafts) reads from here.

For each employee it stores:

- **First / Last name** — synced from Square; read-only locally
- **Category** — `Upper Management` , `Management` , `Staff` . Drives:
 - Payroll grouping and labour-cost subtotals on the Dashboard
 - Whether they get a PTO leave summary in payslip emails (Upper Management is excluded; they don't accrue)
- **Pay Type** — Hourly or Salaried. Drives how Gross is computed on the Payroll page (hours × rate, or fixed weekly salary)
- **Weekly Salary** — only used for Salaried staff
- **Cleaning (€/wk)** — default cleaning allowance; can be overridden per-week on the Payroll page
- **Email** — used for payslip Gmail drafts. If empty, that employee is skipped during draft generation.
- **Former?** — checkbox; ticking it greys out the employee on the PTO summary and removes them from the Log Leave dropdown. Their history is preserved.

How to use it

When a new employee joins

1. Add them in **Square** first (Team → New Team Member). Set their pay type, hourly rate or salary, and **email address**.
2. Open `/settings` → click **Sync from Square** at the top right.
3. They'll appear at the bottom of the table as **Staff** by default.
4. Adjust their Category if they're Management or Upper Management.
5. Set Cleaning (€/wk) if applicable. Save Changes.

When someone leaves

1. Tick the **Former?** checkbox for that employee.
2. Save Changes.

3. They're now greyed out, sorted to the bottom of the PTO list, and removed from the active payroll calculations going forward. History stays intact.

When an employee's email changes

Update it on **Square** first, then click Sync from Square. Square is treated as the source of truth for emails — manual local edits will be overwritten on next sync.

If you must edit locally (e.g. employee doesn't have a Square email field), edit the Email column on Settings and Save. Just remember to also update Square so the next sync doesn't blow it away.

When you change someone's category

Edit the Category dropdown, click Save Changes. Effects:

- Payroll page subtotals re-calculate
- Dashboard payroll split (UM vs M+S) updates next refresh
- Future payslip emails respect the new category (e.g. moving someone out of Upper Management means they'll start receiving the PTO summary block in payslip emails)

Buttons explained

- **Sync from Square** — pulls fresh data for every employee. Adds new ones as Staff. For existing employees, updates names + emails but preserves your local Category, Pay Type, Salary, Cleaning, and Former? settings.
- **Save Changes** — saves whatever you've edited in the table. Always scroll down and click this after editing.

Categories explained

Category	Examples	Notes
Upper Management	Thomas, Soraya	Owners. No PTO accrual. Salaried.
Management	Tomas, Camille, Nheaca	Salaried managers. Get PTO + leave email.
Staff	Bar staff (most)	Hourly. Get PTO + leave email.

Common questions

- **Why can't I edit names?** Names come from Square so they stay in sync with timecards. Edit in Square then sync.

- **An employee's email keeps disappearing:** they don't have an email on their Square profile, so each sync clears it. Either set the email in Square, or accept that you'll need to re-add it locally after each sync.
- **I synced and someone's category changed back to Staff:** that shouldn't happen — local Category is preserved. If it did, file it as a bug; the most likely cause would be a freshly-created employee matching an existing team_member_id.

When something looks wrong

- **Sync fails:** check Square API credentials are set on Render (`SQUARE_ACCESS_TOKEN`). Look at the Render logs for the actual error.
- **An employee not in Settings but is in Square:** click Sync from Square — they should pull in. If still missing, their Square status may be Inactive.
- **An old employee shows as Active but they've left:** tick Former?, Save. If they keep coming back as Active after sync, their Square status is still Active — set them inactive in Square first.

First Day for a New Manager

This is the onboarding sequence for anyone new taking over Cobblestone operations using this app. Designed to take roughly half a day of focused time over the first week.

Before Day 1 — accounts and access

Whoever's onboarding the new manager needs to set up:

1. **A Cobblestone Workspace email** (e.g. `name@cobblestonepub.ie`) created in Google Workspace Admin.
2. **Add them to Square** as a Team Member with the right role.
3. **Add them to the Cobblestone Drive** invoices folder as a Viewer (or Editor if they'll handle invoice approval).
4. **Decide if they need Render access** — usually no. Only the person responsible for deploys + env var changes needs it.
5. **Send them this docs folder URL** ahead of Day 1 so they can read.

Day 1 — orientation (90 min)

Sit with them and walk through:

1. **Open the app** at the Render URL. Sign in if Basic Auth is set.
2. **Dashboard tour** (15 min). Point out: - The KPI strip (yesterday's net sales, YoY uplift, payroll % of net, T-shirt totals) - Daily sales chart vs 2025 - VAT periods at the bottom
3. **Settings tour** (15 min). Show the employee directory. Show what each Category means. Show the Sync from Square button.
4. **Bookkeeping tour** (20 min). Show the pending invoice queue. Open one to show the AI extraction. Approve one together. Show the Drive watcher status panel and click Scan Drive Now.
5. **Payroll tour** (20 min). Open the previous (already-finalized) week. Walk through the columns. Open the Accountant Files page.
6. **PTO tour** (10 min). Show the summary. Log a fake leave entry then delete it (so they see the flow without messing up real data).
7. **Bookings tour** (10 min). Show the active bookings list. Open one to show the detail page + portal link.

Don't try to teach them everything. The goal is "they know where things are."

Week 1 — shadow

For the first weekly cycle, the new manager **watches** while you do each step:

- Monday-Tuesday: payroll preparation
- Wednesday-Thursday: process Peter's reply, generate drafts
- Friday: invoice approval
- Sunday: review next week's bookings

Have them keep notes on questions. Answer at the end of each session.

Week 2 — co-pilot

The new manager does the daily and weekly tasks **with you watching**:

- They click the buttons.
- They confirm the values.
- They make decisions about edge cases.
- You confirm before they hit Save / Send.

Common pitfalls to call out:

- **Don't click Send on draft emails until you've checked attachments.**
- **Always Save Tips, Cleaning & Bonus before clicking Finalize Week.** Once finalized, edits need the admin password.
- **Approve only when you've verified the supplier name.** "Unknown" shows up when Claude can't read the supplier; always fix before approving.
- **Sync from Square before adding emails manually.** Avoids the manual edit getting overwritten.

Week 3 onwards — solo

The new manager runs the cycle on their own. You stay reachable for questions but don't sit with them.

A useful habit: at the end of week 4, do a 30-minute review together — what's been smooth, what's been confusing, what would they change. Update these docs based on their feedback.

Reference materials

Hand them these as a reading list:

1. `SOP.md` — bookmark this; refer to the troubleshooting table any time something looks wrong.
2. The numbered briefs (01-07) — read in order over the first week.
3. `Cobblestone_Bookings_SOP.pdf` — only if they're handling bookings; it's the full deep-dive.
4. `Cobblestone_Manager_Guide.html` — older training material; still relevant for general operations philosophy.

When they're stuck

If they hit something not in the docs:

1. Check the **flash messages** at the top of the page — almost always say what's wrong in plain English.
2. Check the **troubleshooting table** in `SOP.md`.
3. If still stuck, the Render logs (cobblestone-pub → Logs) usually tell the full story. Look for `[gmail]`, `[drive]`, `[pto-weekly]` prefixes.
4. Last resort — ping the person who set up the app.

Granting them more access later

As they grow into the role:

- **Render access** — if they'll be responsible for deploys or env var changes, add them as a collaborator.
- **GCP access** — only needed if they'll rotate the service account key or change Workspace delegation. Most managers never need this.
- **Stripe / payments** — separate from this app; out of scope.

Year-End Checklist

Run through this list in the **last two weeks of December** so the year closes cleanly and the new year starts with everything in place.

Most of these are quick (5-10 min each). The whole list shouldn't take more than half a day.

December — final-fortnight tasks

Bookkeeping wrap-up

- [] **Open /bookkeeping** . Filter Status = Pending. Drive the count to zero. Anything left at year-end should be Approved or Rejected.
- [] Cross-check the **Annual Input VAT total** with the accountant's year-end summary. Drill into months that don't match.
- [] Verify **VAT Period 6** (Nov + Dec) is on track. Output VAT comes from Dashboard sales; input VAT must be Approved invoices for Nov + Dec.
- [] In Drive, confirm every December PDF is in the **Processed/** subfolder, not lingering at the root.

Payroll wrap-up

- [] Run the final weekly payroll cycle for the year (typically the week ending the last Sunday of December).
- [] Verify every employee's **Net Pay (accountant)** column is populated for the final week.
- [] Generate and send payslip drafts as usual. Make sure the email bodies show period ending in December.

PTO wrap-up

- [] **Click Recalculate PTO** on the PTO page with **From** set to **2026-01-05** (or wherever the year started) and **To** set to **2026-12-31** . This makes sure the year's accruals are fully up to date before any year-end snapshots.
- [] Take a snapshot: download or screenshot the PTO summary table. Save in Drive somewhere obvious (e.g. **Cobblestone Work/PTO Snapshots/2026-12-31.pdf**). This is the record of every employee's year-end balance.
- [] **Decide carryover policy** with management. The system caps at 21 days, so any surplus over 21 is preserved as **over cap** and replenishes the visible balance as leave is taken next year. Decide if you want to:
 - Leave it as-is (surplus auto-carries over)

- Manually adjust everyone down to a cap (e.g. enforce statutory 4 weeks = 20 days). Use the **Manual Adjustment** form on the PTO page with negative numbers and "Year-end carryover cap" as the reason.

Bookings wrap-up

- [] Verify all December bookings are marked **Completed** (auto-done by the daily cron, but worth confirming).
- [] Archive any cancelled-but-not-deleted bookings.
- [] Set up the new year's **blackout dates** on `/bookings/blackouts` (private events, holidays, maintenance).
- [] Create or roll over any **recurring series** for the new year on `/bookings/series`.

Supplier directory

- [] Review `/bookkeeping/suppliers`. Any suppliers you're no longer using? Mark them inactive (so they don't appear in dropdowns next year).
- [] Any new suppliers from the year-end period whose default category / VAT rate isn't set right? Edit them now.

Settings — annual review

- [] **Sync from Square** (Settings → top right) to pull any end-of-year staff changes.
- [] Walk through the employee list. Anyone marked Active who shouldn't be? Tick **Former?** for them.
- [] Anyone whose **Cleaning (€/wk)** changed during the year and hasn't been updated? Adjust now so January starts clean.
- [] Anyone whose **Category** should change next year (e.g. promoted from Staff to Management)? Update now.

January — opening tasks

First week of January

- [] **Dashboard sanity check.** The dashboard shows current-year vs previous-year. Verify that 2027 (or whatever next year is) is showing zero net sales for the in-progress week and that previous-year (2026) data is correctly archived.
- [] **Hard-coded VAT fallback values** in `routes/dashboard.py` may need updating for the new year. The code has a `FALLBACK_INPUT_VAT_2026` dict with hard-coded numbers for months without invoices yet. If you want this for 2027 too, update the dict before invoices start flowing in. (Or skip — live invoices will fill the gap once approved.)

- [] **Historical payroll dictionary** (also in `routes/dashboard.py` , `HISTORICAL_PAYROLL_2026`) is for legacy weeks before Square timecards were rolled out. New years shouldn't need entries unless there's a similar gap.

First-week PTO

- [] If you adjusted balances for year-end carryover, double-check every employee's Total Adjustments column on the PTO page reflects what you intended.
- [] If you didn't adjust, surplus carries over automatically — the `over cap` line on each employee's row will gradually decrease as they take leave through the year.

Quarterly reminders (any time of year)

- [] **Verify background jobs** are running. Render logs should show regular `[gmail]` , `[drive]` , and weekly `[pto-weekly]` lines. If any are silent for >24h, investigate.
- [] **Rotate the service account key** annually. From the GCP project: Service Accounts → cobblestone-pub-app → Keys → Add new JSON key. Replace `GOOGLE_SERVICE_ACCOUNT_JSON` on Render. After verifying everything still works, delete the old key from GCP.
- [] **Review who has access** to Render, GCP, Workspace Admin, and Square Dashboard. Revoke access for anyone who's left.

Useful queries for year-end

If you need to dig into specific data, these can be run with the SQLite CLI on Render's persistent disk:

```
# Total invoices by month for the year
sqlite3 cobblestone.db "SELECT strftime('%Y-%m', invoice_date) as m,
COUNT(*), ROUND(SUM(net_amount), 2), ROUND(SUM(vat_amount), 2) FROM invoices
WHERE strftime('%Y', invoice_date) = '2026' AND status = 'approved' GROUP BY
m ORDER BY m;"

# Total payroll per month (rough – uses the accountant's net pay)
sqlite3 cobblestone.db "SELECT strftime('%Y-%m', p.pay_date) as m, COUNT(*),
ROUND(SUM(n.net_pay), 2) FROM pay_period_nets n JOIN pay_periods p ON p.id =
n.pay_period_id WHERE strftime('%Y', p.pay_date) = '2026' GROUP BY m ORDER
BY m;"

# PTO accrued and taken by employee for the year
sqlite3 cobblestone.db "SELECT ec.given_name || ' ' || ec.family_name,
ROUND(SUM(a.days_accrued), 2) as accrued, COALESCE((SELECT
ROUND(SUM(t.days_taken), 2) FROM pto_taken t WHERE t.team_member_id =
ec.team_member_id AND strftime('%Y', t.date) = '2026'), 0) as taken FROM
pto_accruals a JOIN employee_categories ec ON ec.team_member_id =
a.team_member_id WHERE strftime('%Y', a.period_start) = '2026' GROUP BY
ec.team_member_id ORDER BY ec.family_name;"
```

These are read-only — safe to run any time.

Don't forget

- The accountant (Peter) likely needs an **end-of-year payroll summary** separate from anything in this app. Coordinate with him on what he needs.
- The **Revenue (Irish tax authority)** annual filings are also external to this app — payroll YTD totals from your accountant.
- **Insurance, lease, software subscriptions** — annual renewals outside this system.
- **Stocktake** — usually done end-of-month or end-of-quarter, not tracked in this app today.

Backroom Bookings — Manager SOP

For Camille, Nheaca, and anyone else running the bookings portal day-to-day. Replaces the old spreadsheet workflow.

If something here doesn't match what you're seeing in the app, ping Soraya — the system is still being polished.

Quick start: the 6 things you'll do most

1. **Triage a new inquiry** → `/bookings` , click into the row, Confirm or Cancel.
2. **Quick Hold a date** that someone texted you about → big "Quick Hold" button at top of `/bookings` .
3. **Send a band their portal link** if they didn't get the auto email → on the booking detail page, "Send portal link" action.
4. **Mark a fee as paid** when cash hits the till → on the booking detail page, "Mark venue fee paid" / "Mark door fee paid".
5. **Publish to Squarespace** → on a confirmed booking, click **Copy formatted (paste into Text Block)** in the Squarespace Listing card, then paste into a Squarespace Text Block. Set the listing-status dropdown to match.
6. **Acknowledge band-side changes** → when an amber/pink banner appears at the top of a booking ("Times changed" or "Ticket info changed"), mirror the change to Squarespace and click **Acknowledge** to clear the alert.

Everything else is bonus.

The dashboard at a glance

`/bookings` shows six tiles at the top. Each is a clickable filter.

Tile	What it counts	When to look
Inquiries to review	New form submissions waiting for you	First thing each morning
Holds	Soft-reserved dates that haven't converted yet	Weekly — chase or release
Tentative	Bookings on hold pending more info	Weekly
Confirmed upcoming	Locked-in future gigs	Reference
Outstanding fees	Confirmed/completed gigs with venue or door fee unpaid	End of week
Not on Squarespace	Confirmed gigs not yet listed on the website	Weekly publishing
Listing info pending	Listed on Squarespace but waiting for info (ticket link, poster, etc.)	Weekly publishing
Door person TBC (≤7 days)	Confirmed gigs in the next week with no door person assigned	Daily check

(Tile counts exclude archived rows.)

Workflow: inquiry → confirmed

When a band submits the form

1. Inquiry lands at `/bookings` with status **Inquiry** (orange badge)
2. Click into it from the bookings list
3. Read through: - Act + event date + day of week - Contact info - Bio / promo text - Ticket price + link (if any) - Support act, door person request - "Recent emails" panel — has there been any back-and-forth via email already?
4. Decide: - **Confirm Booking** → fires the approval email (band + Shane CC'd), generates a €50 door-fee Square link if applicable, and creates the Google Calendar event - **Confirm (silent — no emails)** → same as above but skips the email + Square link. Useful for re-confirms, internal admin fixes, or bookings where you've already coordinated with the band by phone/email - **Tentative** → mark Tentative if you want to soft-hold while you check something - **Cancel + Email Decline** → sends the "date now taken" decline email with a "Pick another date" link, then archives - **Cancel** (silent) → cancels without sending any email - **Archive** → if it's spam or clearly not a fit, archive it (it drops out of all your lists)

Editing a confirmed booking

When you edit a booking that's already confirmed (door time, contact details, support act, notes — anything), the **Google Calendar event auto-refreshes** with the new info on save. No need to manually update the calendar. If you change a confirmed booking back to tentative/hold/inquiry, the calendar event is automatically deleted so the calendar doesn't show a confirmed-looking event for something that isn't.

What the confirmation email does

- Sends to the band with full gig details, venue/door fees, ticketing recommendations, Shane's contact, and a portal link
- **CCs Shane** so he's looped in for sound coordination
- Attaches an `.ics` calendar invite the band can add to their own calendar
- Stamps `confirmation_sent_at` and adds a Google Calendar event

After confirmation

The booking auto-progresses through these markers as work gets done:

- Band uploads their poster via the portal → shows on detail page
- 2 weeks before: a checklist email goes out (door person ask, poster upload reminder, pay-in-advance link)
- 3 days before: countdown reminder
- After the gig: status moves to Completed (manually or via cron)

Quick Hold — soft-reserving a date

When someone texts/calls and says "can I have May 23rd?" but they haven't filled in the form yet:

1. On `/bookings`, click the **Quick Hold** button (top right, between Calendar View and Add Booking)
2. Fill in: - **Held for** — the band/person's name (required) - **Date** (required) - Email + phone (optional) - Notes (optional — e.g. "Texted via WhatsApp, will confirm next week")
3. Submit → creates a booking with status **Hold** (purple badge)

The hold: - Marks the date as **tentative on the public form** — bands using `/book` won't see it as bookable - Shows on your internal calendar in **purple** - Counts on the **Holds** tile - Doesn't trigger any email to the band

When the band confirms, open the hold → change status to **Confirmed** → fill in the missing details → Approve. The hold becomes a real booking and triggers the confirmation

email.

If the hold expires (band ghosted), open it → Cancel or Archive.

Calendar conventions

Open `bookings@cobblestonepub.ie` Google Calendar (subscribe in your own Google account if you haven't already).

Color	What
 Sage green	Form-backed bookings — band has submitted info
 Default yellow	Calendar-only — Tomás added manually, no form info yet
 Lavender	Upstairs / workshop events
 Graphite	Bar / non-Backroom (table holds, filming)

The internal app calendar (`/bookings/calendar`) uses different colors based on **status**, not provenance: - Green = confirmed - Yellow/orange = inquiry/tentative - Purple = hold - Grey = completed - Light grey = cancelled

Common tasks

Send a band their portal link manually

If a band says "I didn't get an email":

1. Open `/bookings/<id>`
2. Verify their email address is right
3. Click **Send portal link** in the actions sidebar
4. Tell them to check spam if it doesn't show within a minute

Mark venue fee or door fee as paid

On the booking detail: - **Mark venue fee paid** button (when €150 lands) - **Mark door fee paid** button (when €50 lands or door takings settle)

These flip the row out of the "Outstanding fees" KPI tile.

Publish a gig to Squarespace

When a gig is confirmed and ready to go on the website:

1. Open the booking. Scroll to the **Squarespace Listing** card (only appears on confirmed bookings that aren't marked internal-only — see "Internal-only events" below).
2. The card shows a live preview of how the listing will render (H2 act name, H3 support act, description paragraphs, links, bold Doors / Gig / Ticket lines).
3. Click **Copy formatted (paste into Text Block)**. This writes rich-text HTML to your clipboard.
4. In Squarespace, add a **Text Block** to the event page (NOT a Code Block — Text Blocks inherit your site's typography). Paste. The H2 / H3 / bold / links all come through with your existing site styles.
5. If the band gave a video URL in the description, add a separate Squarespace **Video Block** above the text — Text Blocks can't render iframes/embeds. There's an inline reminder in the card when a video URL is detected.
6. Back in the app, set the **Squarespace listing** dropdown in the Fees & Listing card:

State	When
Not listed	Default — gig not yet on Squarespace
Listed — info pending	On the site but missing ticket link / poster / final info
Listed — complete	Fully published, nothing missing

The dropdown saves on change. The two intermediate states each have their own KPI tile so you can chase the gaps weekly without losing track.

There's also a plain-text fallback (collapsible "Plain-text version" section) — only useful if you're pasting into a non-Squarespace destination.

Assign a door person

On the booking detail, the Door Person field has options: - **pub** — Cobblestone provides one, €50 door fee charged. Auto-generates a Square payment link the band can use. - **pub_no_fee** — Cobblestone provides one, no fee (residencies, special arrangements). - **own** — band brings their own. - **tbc** — to be confirmed. - **none** — not needed.

The booking detail page shows a coloured badge at the top of the header so you can see the current arrangement at a glance.

Confirmed gigs within 7 days with no door person set show a yellow **Door person TBC** warning badge on the bookings list.

Confirmed gigs where the **pub** is providing (either **pub** or **pub_no_fee**) show a blue **Doorperson needed** badge on the list — useful for scanning staffing needs across the week.

Send a custom message to the band

On the booking detail, **Send message** action: - Free-text subject + body - Wrapped in the Cobblestone brand template - Useful for one-offs ("can you bring extra mic stands?")

Cancel vs archive

- **Cancel** = the gig isn't happening. Status flips to Cancelled, badge goes black, and the booking is auto-archived. Two flavours:
- **Cancel + Email Decline** → sends the "date now taken" email
- **Cancel** (default) → silent, no email
- **Archive** = hide it from the active list (KPI tiles too). The data is still there — toggle "Show archived" on the bookings list to see them. Use for very old completed gigs, spam inquiries, or test bookings you don't want cluttering the queue.

Cancelling auto-archives. To unarchive (restore to active list), flip on "Show archived" toggle, open the booking, and click **Unarchive**.

Daytime-only / non-blocking events

Some events (e.g. Dublin Jazz Coop's Sunday afternoon sessions, private rehearsals before a show) happen during the day and shouldn't block an evening gig from booking. On the booking detail, tick "**Doesn't block public calendar**" — this keeps the booking on your internal views (it shows on `/bookings`, counts on KPI tiles, appears on the Google Calendar) but the public booking form treats the date as **available**.

To bulk-flag a recurring contact's bookings, use:

```
python3 flag_nonblocking.py --email someone@example.com --confirm
```

Filter persistence

When you filter the bookings list (status, search, date range, view) and click into a booking, the "**Back to bookings**" button remembers the filter and returns you to the same view. Works through any number of edits/status changes inside the detail page.

Residency Gigs — the in-house regulars

For events that happen at the Backroom on a recurring basis and don't follow the normal booking workflow — Balaclavas, Caoimhe's Monday dance class, Larry's Night, Pipers' Club, Dublin Jazz Coop — use the **event_type** "**Residency Gigs**". This gives them:

- A pink badge in the bookings list (so they read at a glance)
- A pink colour on the Google Calendar event
- Light-pink row tinting in the bookings list

- **Drops out of the "Door person TBC" KPI tile** and warning badges — these don't need a door person, so they shouldn't trigger the alert
- A **"Hide residency gigs"** filter on the bookings list — flip this on when you want to focus on actual external gigs

Fees, door person, and other fields stay editable — these are defaults, not locked. Override per-booking if a residency night ever does need fees or a door person.

To create a new residency series: 1. `/bookings/series/new` 2. Pick **Event Type: Residency Gigs** from the dropdown 3. Fill in act name, recurrence pattern, start/end dates 4. Submit — all generated bookings inherit the Residency Gigs tag

Dublin Jazz Coop is special — they happen on Sunday afternoons (3pm-6pm), so they're flagged **non-blocking** on the public form (an evening gig can still book the same Sunday). Each Jazz Coop booking carries a note:

Sunday afternoon residency — room is occupied until 6pm. Any evening soundcheck/load-in on the same date must be after 6pm. Shane handles sound. Jazz Coop manage their own door (no door person needed).

When confirming a Sunday-evening booking on a Jazz Coop date, add a note to that booking's description so the band knows about the 6pm load-in cutoff.

What bands can update themselves (via their portal)

Each booking has a band-facing portal at `/book/<token>`. As of May 2026 the band can update three things post-confirmation:

Field	Why it matters
Description	Bio / lineup / blurb for the public listing
Door + gig (start) times	Set times can shift after confirmation — they often don't have them locked when they request the date
Ticket info — type, price, link	Bands often don't have the Eventbrite URL or final price at the moment they request the date

What they **can't** change: the event date, the venue, the contact details, or anything financial. Date changes still come through us.

All band-side edits write to `booking_audit` (visible at the bottom of the booking detail page) so there's always a record.

Acknowledging band-side changes

When a band updates their times or ticket info, an alert surfaces in two places on your side:

- A **coloured banner** at the top of the booking detail page showing old → new values.
- A matching **badge** on the row in the bookings list (🕒 Times changed in amber, 🎫 Ticket info changed in pink).

For **time changes** an email also fires to `cobblestonedublin@gmail.com` — these are higher-urgency since the gig is usually imminent.

Workflow when one of these appears:

1. Open the booking from the badge.
2. Read the banner — it shows you the current values inline.
3. Mirror the change to Squarespace (and the Google Calendar event if it's a time change — but the calendar updates automatically for confirmed bookings, so that's already done).
4. Click **Acknowledge** on the banner. Banner + badge clear, audit log records the acknowledgment.

Info sheet & tech spec acknowledgment

The portal's confirmation checklist asks the band to confirm they've read the **Info Sheet** (venue info, load-in details) and **Tech Spec** (PA, monitors, stage layout) PDFs.

Both PDFs stay available on their portal *after* acknowledgment too — previously the buttons disappeared once acked, but bands kept asking for the links so they're now permanently visible. After acking, a small "Acknowledged YYYY-MM-DD" note appears beside the heading and the helper text changes to "always available here, open any time."

You'll see the acked / not-acked status on the booking detail page's checklist column.

Internal-only events

Some events shouldn't appear on Squarespace at all — private hires, rehearsals, filming sessions, mate-of-the-pub one-offs. Tick "**Don't list on website (internal only)**" in the Booking Details form and click **Save Changes**.

What that does: - Hides the Squarespace Listing card (rich-text generator) on the detail page. - Replaces the Squarespace status dropdown with a muted "Internal only" indicator. - Swaps the row badge on `/bookings` to a grey **Internal only** pill instead of one of the pink/orange/teal listing-status badges. - Excludes the booking from the "Not on Squarespace" and "Listing info pending" KPI tile counts.

Untick to bring it back into the listing workflow at any time.

Weekly run sheet (printable)

`/bookings/week-sheet` — printable summary of the week's confirmed gigs for whoever's working the door / FOH.

One card per gig with everything operationally relevant: act + support, doors / gig / end, door person, fee status (paid/unpaid pills), ticketing, band contact + phone, notes. **Prev / This week / Next week** buttons; **Print** button hides the sidebar for clean A4 output. Cards don't split across page breaks.

Quick workflow: print every Monday and stick it behind the bar so the team can glance at it through the week.

Squarespace listing — 3-state dropdown

On the booking detail page, the **Squarespace listing** dropdown has three options:

State	Meaning
Not listed	Default — gig not yet on the website
Listed — info pending	On the site but waiting for info (ticket link, poster, etc.)
Listed — complete	Fully published, nothing missing

KPI tiles match: "Not on Squarespace" + "Listing info pending" both surface bookings that need your attention. Saves on change — no extra click.

Scenarios

Two bands want the same date

The system flags conflicts as **needs review** during import, but when both submit fresh:

1. Open both bookings (same date filter on `/bookings`)
2. Decide who gets the date based on your judgement
3. Confirm the winner → triggers their confirmation email AND auto-declines other inquiries on the same date with the "date now taken" email (which includes a one-click "Pick another date" link)
4. Verify both emails went out

A confirmed band needs to change date

1. Open the booking
2. Edit the event date inline

3. Use **Send custom message** to confirm the new date with them
4. The Google Calendar event updates automatically

Band asks via phone or WhatsApp instead of the form

1. **Quick Hold** the date so it's locked while you sort it
2. Send them the form link via reply: `bookings.cobblestonepub.ie/book` — the canned Gmail reply has the right wording
3. When they submit, convert the hold to confirmed (or merge manually if needed)

Someone emails `cobblestonedublin@gmail.com` (the old inbox)

- That inbox auto-forwards to `bookings@cobblestonepub.ie`
- Reply with the canned Gmail reply pointing them at the form
- For repeat bookers / known acts, you can also Quick Hold the date while they fill the form

A band doesn't show up

- After the gig date passes, status auto-progresses to **Completed** by the daily cron (or you can flip it manually)
- For a no-show specifically, mark **Cancelled** with a note in the notes field for future reference
- Cancelling auto-archives, so it falls out of the active list

A contact has multiple bookings (e.g. residencies)

For acts/promoters with several gigs (Dublin Jazz Coop has 8+ slots, Pipers' Club is monthly, etc.), the system uses one **multi-gig portal** per email address at `/portal/<token>` :

- One link per contact email — shows ALL their upcoming bookings
- Each gig in the list deep-links to its individual `/book/<token>` page (where they upload posters, ack the info sheet, etc.)
- Used by the **portal-intro mailer** so a contact with 8 dates gets ONE email instead of 8 separate ones

If a band lands on a per-booking page (`/book/<token>`) and they have other active bookings under the same email, a blue **"You have N other bookings — View all →"** banner appears at the top so they can jump to the multi-gig view.

To send portal-intro emails to all confirmed bookings 14+ days out:

```
python3 bookings_send_portal_links.py --dry-run    # preview
python3 bookings_send_portal_links.py             # actually send
```

Idempotent — won't double-send to anyone who's already had one.

When to escalate to Soraya

- Anything sounds like an app bug ("the button doesn't work", error messages, missing data)
- A booking shows wrong info that can't be fixed by editing
- Email isn't sending and you've already verified the contact email
- DKIM / spam complaints from bands
- Need to add a new manager to the system
- Need to add a new feature or change a workflow

For day-of-gig technical issues (sound, equipment, etc.) — that's Shane (+353 85 175 8254).

Reference: keyboard shortcuts & URLs

What	Where
Bookings tracker	/bookings
Calendar view	/bookings/calendar
Weekly run sheet (printable)	/bookings/week-sheet
Single booking	/bookings/<id>
Add booking manually	/bookings/new
Quick hold	Modal on /bookings
Recurring series	/bookings/series
Blackout dates	/bookings/blackouts
Band contacts	/bookings/contacts
Public gig form	/book
Public other form	/book/other (filming, rehearsal, private hire)
Band per-booking portal	/book/<token> (one per booking)
Multi-gig contact portal	/portal/<token> (one per email)
Sound engineer view	/sound (Shane's login only)

Production URL: <https://bookings.cobblestonepub.ie> (or <https://cobblestone-pub.onrender.com> if the custom domain isn't fully set up yet).

Last updated: 15 May 2026 — Camille + Nheaca handover.

Last updated: 11 May 2026 (launch day — go-live).

Cobblestone Backroom — Shane's Quick Reference

A pocket guide to your view of the new bookings system. Most days you won't need much — just a glance at what's coming up. Anything weird, ring Soraya or Tomás.

Logging in

URL: `https://bookings.cobblestonepub.ie/sound`

Username: shane **Password:** sent to you separately — save it in your phone or password manager.

This is your own login — separate from Soraya/Tomás. You'll only see the gigs view; the rest of the manager portal isn't visible to you, which keeps things tidy.

If the URL says "this site can't be reached" the first day, give it an hour for DNS to settle, or use the backup URL: `https://cobblestone-pub.onrender.com/sound`

Your upcoming gigs

After logging in, you land directly on your list — confirmed gigs for the next ~4 months, sorted by date with month dividers.

Each row shows:

- **Date + day of week**
- **Act name**
- **Door time + music start time**
- **Contact email** (band's main contact)
- **Door person TBC** badge — if a gig within 7 days has no door person assigned yet (Tomás's job to sort, but useful to know)
- **Fee paid / Fee outstanding** badge — quick view of which gigs you've already been settled on

Click any row to open the full detail page.

What's on the gig detail page

When you tap into a gig, you see everything that matters to you:

Section	What it shows
Top header	Act + date + day, plus the "Mark fee paid" button (or a "Fee paid ✓" badge if it's already settled)
Details	Door time, music start, support act, door person, expected attendance
Contact	Band's contact name, email (clickable to email them), phone (tap to call)
About the act	Bio + media links (Spotify / Bandcamp / etc.)
Attachments	Posters, tech riders the band has uploaded
Recent emails	Last few exchanges between Tomás and the band — for context
Notes	Anything Tomás has scribbled on the booking

The page auto-updates if Tomás changes a confirmed booking — door times, contacts, support act, notes. So whatever you see is current.

Coordinating sound check / load-in

You're CC'd on the band's confirmation email automatically — they have your email and phone from day 1. But if you want to reach out first:

1. Open the gig
2. Tap the band's email or phone (clickable)
3. Use your usual flow (email / WhatsApp)
4. Confirm sound check time, load-in / load-out, any tech needs

There's no "log my conversation with the band" feature in the app — keep your own notes as you do now.

Marking your fee as paid

When the band pays you on the night (currently you're paid directly for the venue fee that includes your services):

1. Open the gig
2. Tap the green **"Mark fee paid"** button at the top right
3. Confirm the popup

Done. The badge flips to "**Fee paid** ✓" and management's "Outstanding fees" counter drops by one.

If you forget on the night, no problem — mark it next time you're at your phone.

Subscribe to the bookings calendar in your own Google Calendar

So your gigs show up on your phone:

1. In your own Google Calendar, left sidebar → **Other calendars** → + → **Subscribe to calendar**
2. Enter `bookings@cobblestonepub.ie`
3. Save → all upcoming Backroom events now show in your calendar

The colors on that calendar mean: -  Green: form-backed gig (band has submitted info) -  Yellow: calendar-only (we've got the date but no info yet) -  Purple: upstairs / workshop event (not in the Backroom) -  Grey: bar / non-Backroom (not your gig)

When something looks wrong, call us

Issue	Who
Booking detail looks wrong (wrong time, wrong band)	Tomás (he confirms the bookings)
The app errors out / a button doesn't work	Soraya (she manages the system)
Band hasn't responded to you about sound check	Tomás — he can chase them
You see a confirmed gig you didn't know about	Tomás — sometimes new bookings come in fast

Soraya: *(her contact)* Tomás: *(his contact)*

What you can and can't do

You can: - Read everything on your gigs list - Mark fee paid (the only write action you have) - Click links to email / phone the band

You can't (and that's by design — keeps you focused): - See or change booking statuses - Cancel or archive bookings - See past gigs (cutoff is today onwards) - See payroll, PTO,

bookkeeping, KPIs, etc. - Edit any field on a booking

If a booking does need editing (wrong time, wrong band name), tell Tomás — he has full access.

Questions? Ring Soraya or Tomás. Welcome to the new system!

Last updated: 10 May 2026.

Backroom Bookings — Cheat Sheet

Keep this open while you work — covers the 95% of tasks you'll do day-to-day. For everything else, see the full Manager SOP (doc 11).

Bookings tracker: bookings.cobblestonepub.ie/bookings

The 6 things you'll do most

1. Triage a new inquiry

`/bookings` → click the row with the **orange "Inquiry" badge**. Read the form, then pick one of:

Action	What happens
Confirm Booking	Sends approval email (band + Shane CC'd), creates the Google Calendar event
Confirm (silent)	Same as above but skips the email + Square link — for re-confirms or things already coordinated by phone
Tentative	Soft-hold while you check something
Cancel + Email Decline	Sends the "date unavailable" email with a rebook link, then auto-archives
Cancel (silent)	Cancels without sending any email

Always **check the "Recent emails" panel** on the detail page first — you might already have context.

2. Quick Hold a date

Someone texts/WhatsApps "can I have May 23rd?" but hasn't filled the form?

`/bookings` → click **Quick Hold** (top right) → fill in name + date + notes → Submit.

- Date goes **purple** on your internal calendar
 - Shows as **Tentative** on the public form (still bookable by other bands — they get a "your request will be reviewed" message)
 - **No email** sent to the band
 - When they confirm → open the hold → change status to **Confirmed** → fill in missing details → Approve
-

3. Send a band their portal link

Band says "I didn't get the email"?

Booking detail page → **Send portal link** in the actions sidebar. Tell them to check spam if it doesn't show within a minute.

4. Mark a fee as paid

Booking detail page →

- **Mark venue fee paid** when €150 lands
- **Mark door fee paid** when €50 lands or the door takings settle

Drops out of the "Outstanding fees" KPI tile.

5. Publish a gig to Squarespace

Booking detail page → scroll to the "**Squarespace Listing**" card (only appears on confirmed bookings that aren't marked internal-only):

1. The card shows a live preview of the formatted listing.
2. Click **Copy formatted (paste into Text Block)**.
3. In Squarespace, add a **Text Block** to the event page and paste. Headings (H2 title, H3 support act), bold (Doors / Gig / Ticket), and links inherit your site's existing typography.
4. (If the band gave a video URL, add a separate Squarespace **Video Block** — Text Blocks can't render embeds.)
5. Back in the app, set the **Squarespace listing** dropdown in Fees & Listing:

State	When to pick it
Not listed	Default — haven't put it on the site yet
Listed — info pending	On the site but waiting for ticket link / poster / info
Listed — complete	Fully published, nothing missing

The row badge on `/bookings` flips colour to match: pink → orange → teal.

6. Acknowledge a band-side change

When a band updates their times or ticket info via their portal, you get an amber / pink **alert banner** on the booking detail page *and* a matching badge on the bookings list row.

1. Open the booking — banner shows old → new values.
2. Mirror the change to Squarespace (and the calendar if it's a time change — that updates automatically too).
3. Click **Acknowledge** to clear the banner + badge.

Times changes also fire an email to `cobblestonedublin@gmail.com`. Ticket-info changes don't (less urgent).

Reading the dashboard

The tiles at the top of `/bookings` are clickable filters:

Tile	What it shows
Inquiries to review	New form submissions waiting for you
Holds	Quick-held dates that haven't converted yet
Tentative	Soft-held bookings pending more info
Confirmed upcoming	Locked-in future gigs
Outstanding fees	Confirmed/completed gigs unpaid
Not on Squarespace	Confirmed but not yet on the website (excludes internal-only)
Listing info pending	On the website but missing info (excludes internal-only)
Door person TBC (≤7 days)	Gigs within a week with no door person — chase Soraya/Tomás

Row badges on the bookings list

What the coloured pills next to each act name mean:

Badge	Meaning
 Residency (pink)	In-house regular — don't normally need attention
 Archived (grey)	Cancelled / completed and tucked away
 Door person TBC (yellow)	Confirmed gig within 7 days with no door person assigned
 Times changed (amber)	Band updated door / gig times via their portal — acknowledge after mirroring
 Ticket info changed (pink)	Band updated ticketing type / price / link via their portal — acknowledge after mirroring
 Doorperson needed (blue)	Pub is staffing the door (pub-provided, with or without fee) — for scheduling
 Internal only (grey)	"Don't list on website" ticked — won't appear in Squarespace workflow tiles
Listing status (pink/orange/teal)	Not on website / Needs info / On website

What residency gigs look like

Balaclavas (Wednesdays), Caoimhe Mondays, Larry's Sunday, Pipers' Tuesday, Dublin Jazz Coop Sundays — these are in-house regulars tagged as "**Residency Gigs**".

- Show with a **pink badge** in the bookings list
- Pink colour on the calendar
- Don't need door people or fees (defaults to 0)
- Don't trigger Door TBC warnings
- **Special: Dublin Jazz Coop is non-blocking** — Sunday-evening gigs can still book the same date. Note: load-in/soundcheck must be **after 6pm** when Jazz Coop is on.

You'll rarely need to touch residency rows — they manage themselves.

What bands can update themselves

Bands have always been able to edit their **description** via the portal. As of May 2026 they can also update:

- **Door / gig times** — fires an email + alert banner + badge to us.

- **Ticket info** (ticketing type, price, link — Eventbrite URL etc.) — fires a banner + badge (no email). Useful because they often don't have the link at the moment they request the date.

Both edits write to `booking_audit` so you can always see who changed what when. They're blocked for cancelled / completed bookings.

What they **can't** change: the date, the venue, the contact details, or anything financial. Date changes still go through us.

Internal-only events

Some events shouldn't appear on Squarespace — private hire, rehearsal, filming, mate's gig.

Booking detail → Booking Details form → tick **"Don't list on website (internal only)"** → **Save Changes**.

What that does: - Hides the Squarespace Listing card and dropdown on the detail page. - Replaces the pink/orange/teal row badge with a grey **Internal only**. - Drops out of "Not on Squarespace" / "Listing info pending" tile counts.

Untick to put it back into the listing workflow.

Door person options

Option	What it means
Pub-provided (€50)	We staff the door, €50 door fee applies. Auto-generates a Square payment link.
Pub-provided (no fee)	We staff the door, no fee (residencies, special arrangements).
Bringing own	Band is bringing their own — we don't need to schedule anyone.
Not needed	No door person at all (private events, intimate gigs).
TBC	Still being decided. Triggers the yellow ⚠ warning if the gig is within 7 days.

The header badge on the booking detail page shows the current setting at a glance.

When something doesn't go to plan

Problem	What to do
Band says they didn't get the confirmation email	Booking detail → Send portal link action, then ask them to check spam
Two bands want the same date	Confirm the winner → auto-fires decline email to the loser with a "pick a new date" link
Band asks to change the date	We have to do this — open booking → edit event_date → Save Changes. Calendar auto-updates. Use Message Band to confirm with them
Band-side time change banner	Open booking → mirror to Squarespace → click Acknowledge to clear
Band-side ticket info change banner	Open booking → mirror to Squarespace → click Acknowledge to clear
Date is wrong / band name typo	Open booking → edit field → save (Calendar event auto-refreshes for confirmed bookings)
A gig got cancelled	Status dropdown → Cancelled. Auto-archives + clears the Calendar event. Use Cancel + Email Decline if you want the band to get a polite email
Want to un-cancel	Toggle "Show archived" → open booking → Unarchive button

The phone tree

Issue	Who to call
Booking decisions / who plays what	Tomás (primary booker)
App errors, broken buttons, missing data	Soraya (system owner)
Sound / day-of-show technical issues	Shane — +353 85 175 8254
DKIM / spam complaints from bands	Soraya
Adding a new manager to the system	Soraya

URLs you'll use

What	URL
Bookings tracker	/bookings
Calendar view	/bookings/calendar
Weekly run sheet (printable, for door / FOH)	/bookings/week-sheet
Recurring series	/bookings/series
Band contacts	/bookings/contacts
Public gig form	/book (share with bands)
Public other-events form	/book/other (filming, rehearsal, private)

Production base URL: <https://bookings.cobblestonepub.ie>

Weekly run sheet — print every Monday

One card per confirmed gig in the current Mon–Sun window. Shows act, doors, gig, end, door person, fee status, ticketing, band contact, notes. Click **Print** at the top of the page; the sidebar hides automatically for clean A4 output. **Previous week / This week / Next week** buttons for navigation.

Stuck on something? Ring Soraya. Welcome to the team!

Last updated: 15 May 2026 — Camille + Nheaca handover.
