

Cobblestone Pub App — Standard Operating Procedure

This document is the master operating procedure for the Cobblestone Pub management app. It ties together the per-section briefs (in this same folder) into daily / weekly / monthly checklists.

For the deeper "what does X do and how do I use it" detail on any section, open its brief. They're numbered:

1. Dashboard
 2. Payroll — Weekly
 3. Payroll — Accountant Files
 4. PTO Tracker
 5. Bookkeeping & Invoices
 6. Backroom Bookings
 7. Settings
 8. New Manager Onboarding
 9. Year-End Checklist
-

Daily routine

Morning (10 min)

1. **Open the Dashboard.** Scan yesterday's net sales vs the same day in
2. Anything off by more than 20% — investigate.
3. **Open Bookings.** Anything happening today? Door staff arrangements confirmed? Door fee paid?
4. **Open Bookkeeping.** Drive watcher panel — any pending invoices in the root folder? Any errors flagged on the most recent scan? Click Scan Drive Now if anything looks unprocessed.

Throughout the day

- Suppliers email invoices to `invoice@cobblestonepub.ie` — the system imports them automatically. You don't need to do anything until the weekly review.
- Staff request leave → log it on `/pto` so the Payroll page picks it up automatically next week.
- New booking enquiries arrive → review on `/bookings` and either Confirm, set Tentative, or Reject.

Weekly routine

Sunday night / Monday morning (after the work week ends)

1. **PTO auto-recalc** runs at 23:00 Sunday (Dublin) automatically. Check `/pto` Monday morning — every active employee should have an accrual row for the week that just ended. If anyone shows 0 accrued for a week they worked, see the [PTO troubleshooting](#) section.

Monday — Tuesday: prepare payroll

1. `/payroll` for last week.
2. Enter tips, cleaning, bonus per employee. **Save**.
3. Verify Holiday Pay column matches what's logged on `/pto`.
4. Click **Peter Excel** → download → email to Peter (the accountant).
5. Click **Finalize Week**. This locks tips/cleaning/bonus.

Wednesday — Thursday: process Peter's reply

When Peter sends back the gross-to-net summary + combined payslips:

1. `/payroll/accountant` for that week.
2. **Upload** both PDFs.
3. **Confirm Mappings** — first time: pick the right Cobblestone employee for any unmapped row, save. Subsequent weeks: auto-mapped.
4. **Test Gmail Connection** — quick check that drafts will work.
5. **Generate Drafts**.
6. **Open Gmail Drafts** in `info@cobblestonepub.ie` → review each → Send. Should take ~5 minutes for the whole team.

Friday: bookkeeping review

1. `/bookkeeping` → filter Status = Pending.
2. For each: click in, verify supplier / amounts / VAT / category, approve. Reject duplicates and junk.
3. Clear the queue before close of business.

Sunday: this week's bookings prep

1. `/bookings` → filter to this coming week.
 2. For each show: door arrangements set? Door staff assigned?
 3. Reach out manually if any band hasn't replied to the reminder emails.
-

Monthly routine

First few days of the new month

1. **Dashboard** — verify the previous month's totals look reasonable. Scroll to the VAT periods section.
 2. **Bookkeeping** — confirm every invoice for the previous month is Approved, not Pending. The VAT period totals depend on it.
 3. If a VAT period has just closed (15th of every other month): - Verify the period status moved from "Pending" to "Due" on the Dashboard. - Cross-check the net VAT due against your accountant's number. - If they differ by more than rounding, drill into the monthly breakdown on Bookkeeping to find the difference.
-

Quarterly / occasional tasks

When a new employee joins

1. Square first: add them as a Team Member with pay type, rate, email.
2. `/settings` → **Sync from Square** → they appear as Staff.
3. Set Category if they're Management or Upper Management.
4. Set Cleaning (€/wk) if applicable. Save.
5. (PTO will start accruing automatically from their first timecards.)

When someone leaves

1. Square first: set their Team Member status to Inactive.
2. `/settings` → tick **Former?** for that employee → Save.
3. Their data stays in history; they're sorted to the bottom of PTO and excluded from active payroll calculations.

When a supplier starts emailing the wrong address

If a new supplier emails `info@` instead of `invoice@`:

1. Gmail (`info@cobblestonepub.ie`) → Settings → Filters and Blocked Addresses → Create new filter.
 2. From: `accounts@thatsupplier.com` .
 3. Forward to: `invoice@cobblestonepub.ie` .
 4. (Optional: also Skip the Inbox / Archive on `info@` to keep that inbox clean.)
-

Troubleshooting cheat sheet

Symptom	Where to look
Dashboard says "Loading..." for ages	First-load — wait 2-3 min
Numbers on Dashboard look stale	Click refresh button (top right of dashboard)
Employee not on Payroll page	<code>/settings</code> → Sync from Square
Hours = 0 on Payroll for someone who worked	Square doesn't have their timecards
Holiday Pay missing on Payroll	Log it on <code>/pto</code> first; auto-syncs
Payroll Test Gmail fails: <code>unauthorized_client</code>	Workspace delegation propagation, wait 2 min
Drive watcher panel shows red "API not used"	Enable Drive API in Google Cloud project
Drive watcher shows 403	Share folder with <code>info@</code> as Editor
<code>GOOGLE_DRIVE_INVOICES_FOLDER_ID</code> not set	Set env var on Render → cobblestone-pub
Invoice arrived but shows "Unknown" supplier	Open it, edit, save. Claude was unsure.
PTO accrual = 0 for a week someone worked	Check Payroll for that week; recalc PTO
Booking confirmation email didn't arrive	Check Render logs for the booking

What runs automatically (background jobs)

Job	Cadence	What it does
Dashboard cache warmup	At app boot	Pre-fetches each week's Square data
Gmail invoice poller	Every 30 min	Pulls PDFs from <code>invoice@</code> , extracts, saves
Drive folder watcher	Every 30 min	Imports human-uploaded PDFs from the invoices folder
PTO weekly auto-recalc	Sundays 23:00 Dublin	Recalculates 4 weeks of accruals + 13-week avg shifts
Booking reminders (cron)	Daily	Sends pre-show reminders
Booking auto-complete	Daily	Marks past bookings Completed

All of these are **idempotent** — safe to run multiple times, won't double-process anything.

To check any of these is running, look at the cobblestone-pub service logs on Render and grep for the prefix: - [gmail] — invoice email poller - [drive] — Drive folder watcher - [pto-weekly] — PTO auto-recalc - [warmup] — Dashboard cache priming

Credentials and where they live

The app needs three credential sets, all stored as env vars on the **cobblestone-pub** Render service:

1. **SQUARE_ACCESS_TOKEN** — Square API access for sales, timecards, team members.
2. **GOOGLE_SERVICE_ACCOUNT_JSON** — Full JSON of the Google service account (from the GCP project `cobblestone-pub-app`). Used for: - Gmail invoice polling on `invoice@cobblestonepub.ie` - Gmail draft creation on `info@cobblestonepub.ie` - Drive folder access (read + write + move)
3. **ANTHROPIC_API_KEY** — Claude API for invoice extraction.
4. **GOOGLE_DRIVE_INVOICES_FOLDER_ID** — Drive folder where supplier invoices land (and the watcher scans).
5. **GOOGLE_DRIVE_STATEMENTS_FOLDER_ID** — Drive folder where supplier statements (rolled-up account summaries) land.

The service account in (2) needs **domain-wide delegation** authorised in Google Workspace Admin for these scopes: - `https://www.googleapis.com/auth/gmail.modify` - `https://www.googleapis.com/auth/drive`

Plus **Google Cloud APIs** enabled in the same project: - Gmail API - Google Drive API

Plus the **Drive invoices folder** must be shared with both: - `info@cobblestonepub.ie` (for the Drive watcher) - `invoice@cobblestonepub.ie` (for the email poller's uploads)

If you ever need to rotate the service account key, generate a new JSON in GCP, paste it into Render's `GOOGLE_SERVICE_ACCOUNT_JSON`, save. Render auto-redeploys; everything resumes.

When in doubt

If something breaks and the troubleshooting table doesn't help:

1. **Check Render logs** for the cobblestone-pub service — most issues surface there with a clear error message.
2. **Check the relevant section's brief** in this folder.

-
-
3. **The flash messages on each page** usually say exactly what's wrong when they're red.
